"Complementary expression of transmembrane ephrins and their receptors
of in the mouse spinal cord: a possible role in constraining the
orientation of longitudinally projecting axons.";

The development 127:1397-1410(2000).

C -1- FUNCTION: WAY PLAY A PILYOTAL ROLE IN FOREBRAIN FUNCTION. BINDS TO,
AND INDUCE THE COLLAPSE OF, COMMISSURAL AXONS/GROWTH CONES IN
C -1- FUNCTION: WAY PLAY A ROLE IN CONSTRAINING THE ORIENTATION OF
LONGITUDINALLY PROJECTING AXONS.

C -1- SUBCELLULAR LOCATION: Type I membrane protein.
C -1- SUBCELLULAR LOCATION: Type I membrane protein.
C -1- SUBCELLULAR LOCATION: Type I membrane protein.
C SPECIFICALLY ON COMMISSURAL AXON SEGMENTS THAT HAVE PASSED THROUGH
THE FLOOR PLATE. EXPRESSED IN CELLS OF THE RETINAL GANGLION CELL
C LAYER DURING RETINAL AXON GUIDANCE TO THE OPTIC DISC.

-1- DEVELOPMENTAL STAGE: EXPRESSED IN THE FLOOR PLATE THROUGHOUT THE
PERIOD OF COMMISSURAL AXON PATHFINDING.

-1- SIMILARITY; BELONGS TO THE EPHRIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright.                                                                          "Complementary expression of transmembrane ephrins and their receptors
or in the mouse spinal cord; a possible role in constraining the
orientation of longitudinally projecting axons.";

Development 127:1397-1410(2000).

1- FUNCTION: MAY PLAY A ROLE IN CONSTRAINING THE ORIENTATION OF
C- PUNCTION: MAY PLAY A ROLE IN CONSTRAINING THE ORIENTATION OF
C- ISUBUNIT: BINDS TO THE RECEPTOR TYROSINE KINASE EPHB4.

1- SUBCELLULAR LOCATION: Type I membrane protein.
C- I- SUBCELLULAR LOCAMISSURAL AXON SECRENTS THAT HAVE PASSED THROUGH
THE FLOOR PLAYE. EXPRESSED IN CELLS OF THE RETINAL GANGLION CELL
C- LAYER DURING RETINAL AXON GUIDANCE TO THE OPIC: DISC:
C- DEVELOPMENTAL STAGE: EXPRESSED IN THE FLOOR PLAYE THROUGHOUT THE
DERIOD OF COMMISSURAL AXON PATHFINDING.
C- I- PTM: INDUCIBLE PHOSPHORYLATION OF TYROSINE RESIDUES IN THE
C CYTOPLASMIC DOWAIN (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P52800;

C -!- FUNCTION - BINDS TO, AND INDUCE THE COLLARSE OF, COMMISSURAL AXONS/GROWTH CONCES IN VITRO. MAY PLAY A ROLE IN CONSTRAINING THE COLENTATION OF LONGITUDINALLY PROJECTING AXONS.
C -!- SUBUNIT: BINDS TO THE RECEPTOR TYROSINE KINASES EPHB1 AND EPHA1 ---
-!- TISSUE SPECIFICATION: Type I membrane protein.
SPECIFICALLY ON COMMISSURAL AXON SEGMENTS THAT HAVE PASSED THROI THE FLOOR PLATE. EXPRESSED ON CELLS OPTIC BISC.
-!- TURKER DURING RETURAL AXON GUIDANCE TO THE OPTIC DISC.
-!- DEVELOPMENTAL STAGE: EXPRESSED IN THE FLOOR PLATE THROUGHOUT THE PERIOD OF COMMISSURAL AXON PATHFINDING

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NERVOUS TISSUE.

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: IN THE ADULT, EXPRESSED AT LOW LEVELS IN

TISSUE SPECIFICITY: IN THE ADULT, EXPRESSED AT LOW LEVELS IN

ADULT TISSUES WITH INCREASED LEVELS OBSERVED IN THE KIDNEY,

OCCYTES, OVARY AND TESTIS.

PYM: INDUCIBLE PROSPHORYLATION OF TYROSINE RESIDUES IN THE

CYTOPLASMIC DOMAIN (BY SIMILARITY).

SIMILARITY: BELONGS TO THE EPHRIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      _TaxID=8355;
